Sparking Realities of Welding for Businesses

Canby High School, Yellow Medicine East High School and SMI & Hydraulics received a \$20,000 LYFT Pathways grant to introduce junior high students to the field of welding using a welding simulator. High school students will take tours of the manufacturing facilities and work with business professionals on a special welding project. They will learn blueprint reading, set up, fabrication, material list development and budgeting during the project. SMI & Hydraulics will cover the cost of the welding supplies for project, but students will reimburse the company for material costs upon sale of their project.
